

Accreditation Quality Report

Welcome to the Joint Commission's Quality Report. We know how important reliable information is to you and your family when making health care decisions. This Quality Report will help you make the right decisions to meet your needs. Since 1951, the Joint Commission has been the national leader in setting standards for health care organizations. When a health care organization seeks accreditation, it demonstrates commitment to giving safe, high quality health care and to continually working to improve that care.

The Quality Report is only one way to determine whether a health care organization can meet your needs. Discuss this report with your doctor or with other professional acquaintances before making a care decision. In addition to the accreditation status of the organization, the Quality Report uses checks, pluses, and minuses in each of the following key areas to help you compare a health care organization with similar accredited organizations.

- National Patient Safety Goals - safety guidelines that target the prevention of medical errors such as surgery on the wrong side of the body and safe medication use.
- National Quality Improvement Goals - measures the care of patients with specific conditions such as heart failure or pregnancy.

Not all measures are relevant to or available for all types of health care organizations. The Joint Commission will add relevant measures of health care quality as more measures become available. Your comments are just as important to us. The content and format of the Quality Report will be updated from time to time based on changes in the health care industry and your suggestions. Please call Customer Service at 630-792-5800 or e-mail the Joint Commission at qualityreport@jointcommission.org with your comments and suggestions.

Mark R. Chassin, MD, MPP, MPH
President of the Joint Commission

Summary of Quality Information

Symbol Key

- This organization achieved the best possible results.
- This organization's performance is above the target range/value.
- This organization's performance is similar to the target range/value.
- This organization's performance is below the target range/value.
- This Measure is not applicable for this organization.
- Not displayed

Footnote Key

1. The Measure or Measure Set was not reported.
2. The Measure Set does not have an overall result.
3. The number of patients is not enough for comparison purposes.
4. The measure meets the Privacy Disclosure Threshold rule.
5. The organization scored above 90% but was below most other organizations.
6. The Measure results are not statistically valid.
7. The Measure results are based on a sample of patients.
8. The number of months with Measure data is below the reporting requirement.
9. The measure results are temporarily suppressed pending resubmission of updated data.
10. Test Measure: a measure being evaluated for reliability of the individual data elements or awaiting National Quality Forum Endorsement.
11. There were no eligible patients that met the denominator criteria.

Heart Attack Care	This category of evidence based measures assesses the overall quality of care provided to Heart Attack (AMI) patients.		

Compared to other Joint Commission
Accredited Organizations

Measure	Explanation	Hospital Results	Compared to other Joint Commission Accredited Organizations			
			Nationwide		Statewide	
			Top 10% Scored at Least:	Average Rate:	Top 10% Scored at Least:	Average Rate:
ACE inhibitor or ARB for LVSD*	Heart attack patients who receive either a prescription for a medicine called an "ACE inhibitor" or a medicine called an angiotensin receptor blocker (ARB) when they are discharged from the hospital. This measure reports what percent of heart attack patients who have problems with the heart pumping enough blood to the body were prescribed medicines to improve the heart's ability to pump blood.*	 100% of 18 eligible Patients	100%	98%	100%	97%
Aspirin at arrival*	Heart attack patients receiving aspirin when arriving at the hospital. This measure reports what percent of heart attack patients receive aspirin within 24 hours before or after they arrive at the hospital. Aspirin is beneficial because it reduces the tendency of blood to clot in blood vessels of the heart and improves survival rates.*	 100% of 69 eligible Patients	100%	99%	100%	99%
Aspirin prescribed at discharge*	Heart attack patients who receive a prescription for aspirin when being discharged from the hospital. This measure reports how often aspirin was prescribed to heart attack patients when they are leaving a hospital. Aspirin is beneficial because it reduces the tendency of blood to clot in blood vessels of the heart and improves survival rates.*	 100% of 50 eligible Patients	100%	99%	100%	99%

The Joint Commission only reports measures endorsed by the National Quality Forum.

Heart Attack Care	This category of evidence based measures assesses the overall quality of care provided to Heart Attack (AMI) patients.		

Compared to other Joint Commission
Accredited Organizations

Measure	Explanation	Hospital Results	Compared to other Joint Commission Accredited Organizations			
			Nationwide	Average Rate:	Statewide	Average Rate:
Beta blocker prescribed at discharge*	Heart attack patients who have a medicine called a "beta blocker" prescribed when they are discharged from the hospital. This measure reports what percent of heart attack patients were prescribed a special type of medicine when leaving the hospital, that has been shown to reduce further heart damage.*	 100% of 44 eligible Patients	100%	99%	100%	99%
Fibrinolytic therapy received within 30 minutes of hospital arrival*	Heart attack patients who receive a medicine that breaks up blood clots (fibrinolytic therapy) within 30 minutes of hospital arrival. This measure reports how quickly heart attack patients were given a medication that breaks up blood clots (fibrinolytic therapy). Breaking up blood clots increases blood flow to the heart. If blood flow is returned to the heart muscle quickly during a heart attack, the risk of death is decreased. The medicine that breaks up clots in the arteries and allows the return of normal blood flow is called fibrinolytic therapy and is used in certain types of heart attacks. It is important that this medicine be given quickly after a heart attack is diagnosed.*	3 ----	100%	58%	---- ³	---- ³
Statin Prescribed at Discharge	Heart attack patients who receive a prescription for a statin medication at discharge. This measure reports what percentage of heart patients who have problems with high cholesterol were prescribed medications to help reduce their "bad" cholesterol.	 98% of 43 eligible Patients	100%	99%	100%	98%

Surgery patients taking a Beta-Blocker before hospital admission who received a Beta-Blocker in the time frame of 24 hours before surgery through the time they were in the recovery room.	This measure reports the number of patients taking a Beta-Blocker medication before hospital admission who received a Beta-Blocker in the time frame of 24 hours before surgery through the time they were in the recovery room. Risk of complications is decreased when the Beta-Blocker is continued during the surgical time frame.	99% of 359 eligible Patients	100%	98%	100%	98%

The Joint Commission only reports measures endorsed by the National Quality Forum.
