

Accreditation Quality Report

Version: 11 Date: 11/26/2013

Welcome to the Joint Commission's Quality Report. We know how important reliable information is to you and your family when making health care decisions. This Quality Report will help you make the right decisions to meet your needs. Since 1951, the Joint Commission has been the national leader in setting standards for health care organizations. When a health care organization seeks accreditation, it demonstrates commitment to giving safe, high quality health care and to continually working to improve that care.

The Quality Report is only one way to determine whether a health care organization can meet your needs. Discuss this report with your doctor or with other professional acquaintances before making a care decision. In addition to the accreditation status of the organization, the Quality Report uses checks, pluses, and minuses in each of the following key areas to help you compare a health care organization with similar accredited organizations.

- National Patient Safety Goals safety guidelines that target the
 prevention of medical errors such as surgery on the wrong side of
 the body and safe medication use.
- National Quality Improvement Goals measures the care of patients with specific conditions such as heart failure or pregnancy.

Not all measures are relevant to or available for all types of health care organizations. The Joint Commission will add relevant measures of health care quality as more measures become available. Your comments are just as important to us. The content and format of the Quality Report will be updated from time to time based on changes in the health care industry and your suggestions. Please call Customer Service at 630-792-5800 or e-mail the Joint Commission at qualityreport@jointcommission.org with your comments and suggestions.

Measure Area Explanation Nationwide Statewide

Heart Attack Care This category of evidence based measures assesses the overall quality of care provided to Heart Attack (AMI) patients.

		Соі	npared to d Accredit	other Joint ed Organiz		on	
						atewide	
Measure	Explanation	Hospital Results	Top 10% Scored at Least:	Average Rate:	Top 10% Scored at Least:	Average Rate:	
Beta blocker prescribed at discharge*	Heart attack patients who have a medicine called a "beta blocker" prescribed when they are discharged from the hospital. This measure reports what percent of heart attack patients were prescribed a special type of medicine when leaving the hospital, that has been shown to reduce further heart damage.*	100% of 180 eligible Patients	100%	99%	100%	99%	
Fibrinolytic therapy received within 30 minutes of hospital arrival*	Heart attack patients who receive a medicine that breaks up blood clots (fibrinolytic therapy) within 30 minutes of hospital arrival. This measure reports how quickly heart attack patients were given a medication that breaks up blood clots (fibrinolytic therapy). Breaking up blood clots increases blood flow to the heart. If blood flow is returned to the heart muscle quickly during a heart attack, the risk of death is decreased. The medicine that breaks up clots in the arteries and allows the return of normal blood flow is called fibrinolytic therapy and is used in certain types of heart attacks. It is important that this medicine be given quickly after a heart attack is diagnosed.*	6 003 − − − − −	100%	65%	3	3

		Compared to other Joint Commission Accredited Organizations				on
		Nationwide Statev				wide
Measure	Explanation	Hospital Results	Top 10% Scored at Least:	Average Rate:	Top 10% Scored at Least:	Average Rate:
Primary PCI received within 90 minutes of hospital arrival*	Heart attack patient with a clogged artery in the heart that is opened with a balloon therapy called PCI within 90 minutes of hospital arrival. This measure reports how quickly heart attack patients had a clogged artery in the heart opened with a balloon therapy called PCI to increase blood flow to the heart and reduce heart damage. Lack of blood supply to heart muscle can cause lasting heart damage. In certain types of heart attacks, a small balloon is threaded into a blood vessel in the heart to open up a clogged artery that keeps the blood from flowing to the heart muscle. It is important that this therapy be given quickly after a heart attack is diagnosed.*	94% of 33 eligible Patients	100%	95%	100%	96%
Statin Prescribed at Discharge*	Heart attack patients who receive a prescription for a statin medication at discharge. Patients who had surgery and received appropriate medicine that prevents infection (antibiotic) and the antibiotic was stopped within 24 hours after the surgery ended.*	This measure reports how often surgery patients whose medicine (an antibiotic) to prevent infection was stopped within 24 hours after the surgery ended. Giving medicine that prevents infection for more than 24 hours after the end of surgery is not helpful, unless there is a specific reason (for example, fever or other signs of infection). Note: Not every surgery requires antibiotics and this measure reports on those selected surgeries where evidence/experts have identified that antibiotics would be helpful.	99% of 459 eligible Patients ⁷	100%	98%	100%	98%	
Patients Having Blood Vessel Surgery*	Overall report of hospital's performance on Surgical Infection Prevention Measure for Blood Vessel Surgery.	99% of 123 eligible Patients ⁷	100%	97%	100%	98%	
Patients having blood vessel surgery who received medicine to prevent infection (an antibiotic) within one hour before the skin was surgically cut.*	This measure reports how often patients having blood vessel surgery received medicine that prevents infection (an antibiotic) within one hour before the skin was surgically cut. Infection is lowest when patients receive antibiotics to prevent infection within one hour before the skin is surgically cut.*	100% of 42 eligible Patients ⁷	100%	98%	100%	98%	
Patients having blood vessel surgery who received the appropriate medicine (antibiotic) which is shown to be effective for this type of surgery.*	This measure reports how often patients who had blood vessel surgery were given the appropriate medicine (antibiotic) that prevents infection which is know to be effective for the type of surgery, based upon the recommendations of experts around the country.*	98% of 42 eligible Patients ⁷	100%	99%	100%	99%
