

# Accreditation Quality Report

Welcome to the Joint Commission's Quality Report. We know how important reliable information is to you and your family when making health care decisions. This Quality Report will help you make the right decisions to meet your needs. Since 1951, the Joint Commission has been the national leader in setting standards for health care organizations. When a health care organization seeks accreditation, it demonstrates commitment to giving safe, high quality health care and to continually working to improve that care.

The Quality Report is only one way to determine whether a health care organization can meet your needs. Discuss this report with your doctor or with other professional acquaintances before making a care decision. In addition to the accreditation status of the organization, the Quality Report uses checks, pluses, and minuses in each of the following key areas to help you compare a health care organization with similar accredited organizations.

- National Patient Safety Goals safety guidelines that target the prevention of medical errors such as surgery on the wrong side of the body and safe medication use.
- National Quality Improvement Goals measures the care of patients with specific conditions such as heart failure or pregnancy.

Not all measures are relevant to or available for all types of health care organizations. The Joint Commission will add relevant measures of health care quality as more measures become available. Your comments are just as important to us. The content and format of the Quality Report will be updated from time to time based on changes in the health care industry and your suggestions. Please call Customer Service at 630-792-5800 or e-mail the Joint Commission at qualityreport@jointcommission.org with your comments and suggestions.

Mark R. Chassin, MD, MPP, MPH President of the Joint Commission

W180 N8085 Town Hall Road, Menomonee Falls, WI

| Heart Attack Care | This category of evidence based measures assesses the<br>overall quality of care provided to Heart Attack (AMI)<br>patients. | Ð   | Ð         |  |  |
|                   |  |   |           |  |  |

|  |  | Compared to other Joint Commission<br>Accredited Organizations |                                |                  |      | on                        |
|--|--|--|--------------------------------|------------------|------|---------------------------|
| Measure  | Explanation  | N<br>Hospital<br>Results                                       | Top 10%<br>Scored<br>at Least: | Average<br>Rate: |      | ewide<br>Average<br>Rate: |
| Beta blocker prescribed at<br>discharge*                       | Heart attack patients who have a<br>medicine called a "beta blocker"<br>prescribed when they are discharged<br>from the hospital. This measure<br>reports what percent of heart attack<br>patients were prescribed a special<br>type of medicine when leaving the<br>hospital, that has been shown to<br>reduce further heart damage.  | 99% of<br>136 eligible<br>Patients                             | 100%                           | 99%              | 100% | 99%                       |
| Primary PCI received within 90<br>minutes of hospital arrival* | Heart attack patient with a clogged<br>artery in the heart that is opened with<br>a balloon therapy called PCI within<br>90 minutes of hospital arrival. This<br>measure reports how quickly heart<br>attack patients had a clogged artery<br>in the heart opened with a balloon<br>therapy called PCI to increase blood<br>flow to the heart and reduce heart<br>damage. Lack of blood supply to<br>heart muscle can cause lasting heart<br>damage. In certain types of heart<br>attacks, a small balloon is threaded<br>into a blood vessel in the heart to<br>open up a clogged artery that keeps<br>the blood from flowing to the heart<br>muscle. It is important that this<br>therapy be given quickly after a heart<br>attack is diagnosed. | 97% of<br>29 eligible<br>Patients <sup>3</sup>                 | 100%                           | 95%              | 100% | 94%                       |
| Statin Prescribed at Discharge                                 | Heart attack patients who receive a<br>prescription for a statin medication at<br>discharge. This measure reports<br>what percentage of heart patients<br>who have problems with high<br>cholesterol were prescribed<br>medications to help reduce their<br>"bad" cholesterol.   | 97% of<br>136 eligible<br>Patients                             | 100%                           | 98%              | 100% | 98%                       |

## **Survey of Patients' Hospital Experiences**

#### Footnote Key

- 1. Fewer than 100 patients completed the HCAHPS survey. Use these rates with caution, as the number of surveys may be too low to reliably assess hospital performance.
- 2. This displays less than 12 months of accurate data.
- 3. Survey results are not available for this period.
- 4. No patients were eligible for the HCAHPS Survey.

For further information and explanation of the Quality Report contents, refer to the "Quality Report User Guide."

How often did staff explain about medicines before giving them to patients?

#### If patients were given medicine that they had not taken before, the survey asked how often staff explained about the medicine. "Explained" means that hospital staff told **what the medicine was for** and what **side effects it might have** before they gave it to the patient.

| Staff "always" explained |                  |                     | Staff "usually" explained |                  |                     | Staff "sometimes" or "never"<br>explained |                  |                     |  |
