

# Accreditation Quality Report

Welcome to the Joint Commission's Quality Report. We know how important reliable information is to you and your family when making health care decisions. This Quality Report will help you make the right decisions to meet your needs. Since 1951, the Joint Commission has been the national leader in setting standards for health care organizations. When a health care organization seeks accreditation, it demonstrates commitment to giving safe, high quality health care and to continually working to improve that care.

The Quality Report is only one way to determine whether a health care organization can meet your needs. Discuss this report with your doctor or with other professional acquaintances before making a care decision. In addition to the accreditation status of the organization, the Quality Report uses checks, pluses, and minuses in each of the following key areas to help you compare a health care organization with similar accredited organizations.

- National Patient Safety Goals safety guidelines that target the prevention of medical errors such as surgery on the wrong side of the body and safe medication use.
- National Quality Improvement Goals measures the care of patients with specific conditions such as heart failure or pregnancy.

Not all measures are relevant to or available for all types of health care organizations. The Joint Commission will add relevant measures of health care quality as more measures become available. Your comments are just as important to us. The content and format of the Quality Report will be updated from time to time based on changes in the health care industry and your suggestions. Please call Customer Service at 630-792-5800 or e-mail the Joint Commission at qualityreport@jointcommission.org with your comments and suggestions.

Mark R. Chassin, MD, MPP, MPH President of the Joint Commission

9200 West Wisconsin Avenue, Milwaukee, WI

Measure	Explanation	Hospital Results	Top 10% Scored at Least:	Average Rate:	Top 10% Scored at Least:	Average Rate:
Beta blocker prescribed at discharge*	Heart attack patients who have a medicine called a "beta blocker" prescribed when they are discharged from the hospital. This measure reports what percent of heart attack patients were prescribed a special type of medicine when leaving the hospital, that has been shown to reduce further heart damage.	100% of 225 eligible Patients	100%	99%	100%	99%
Primary PCI received within 90 minutes of hospital arrival*	Heart attack patient with a clogged artery in the heart that is opened with a balloon therapy called PCI within 90 minutes of hospital arrival. This measure reports how quickly heart attack patients had a clogged artery in the heart opened with a balloon therapy called PCI to increase blood flow to the heart and reduce heart damage. Lack of blood supply to heart muscle can cause lasting heart damage. In certain types of heart attacks, a small balloon is threaded into a blood vessel in the heart to open up a clogged artery that keeps the blood from flowing to the heart muscle. It is important that this therapy be given quickly after a heart attacks is diagnosed.	100% of 29 eligible Patients	100%	95%	100%	94%
Statin Prescribed at Discharge	Heart attack patients who receive a prescription for a statin medication at discharge. This measure reports what percentage of heart patients who have problems with high cholesterol were prescribed medications to help reduce their "bad" cholesterol.	100% of 230 eligible Patients	100%	98%	100%	98%

## **National Quality Improvement Goals**

#### Symbol Key

This organization achieved the best possible results
 This organization's performance is above the target range/value.
 This organization's performance is similar to the target range/value.
 This organization's performance is below the target range/value.
 Not displayed

#### **Footnote Key**

- 1. The Measure or Measure Set was not reported.
- 2. The Measure Set does not have an overall result.
- **3.** The number of patients is not enough for comparison purposes.
- 4. The measure meets the Privacy Disclosure Threshold rule.
- 5. The organization scored above 90% but was below most other organizations.
- 6. The Measure results are not statistically valid.
- The Measure results are based on a sample of patients.
- The number of months with Measure data is below the reporting requirement.
   The measure results are temporarily.
- The measure results are temporarily suppressed pending resubmission of updated data.
- Test Measure: a measure being evaluated for reliability of the individual data elements or awaiting National Quality Forum Endorsement.
   There were no eligible patients that me
- **1.** There were no eligible patients that met the denominator criteria.

For further information and explanation of the Quality Report contents, refer to the "Quality Report User Guide."

#### Reporting Period: January 2012 - December 2012

### Measure Area

SCIP – Venous Thromboembolism (VTE) This category of evidenced based measures assesses the use of indicated treatment for the prevention of blood clots in selected surgical patients

Explanation

		Cor		other Joint ed Organiz	Commissic ations	'n
		Ν	lationwide		State	wide
Measure	Explanation	Hospital Results	Top 10% Scored at Least:	Average Rate:	Top 10% Scored at Least:	Average Rate:
Patients having surgery who had treatment prescribed for the prevention of blood clots. Note: Treatment may be medication, stockings, or mechanical devices for exercising the legs.	This measure reports how often patients having surgery had treatment prescribed for the prevention of blood clots. The incidence of blood clots is lowest when patients are treated to prevent them. Note: Not every surgery requires treatment and this measure reports on those selected surgeries where evidence/experts have identified that treatment to prevent blood clots would be helpful.	99% of 488 eligible Patients <sup>7</sup>	100%	99%	100%	99%
Patients having surgery who received the appropriate treatment to prevent blood clots which is shown to be effective for the type of surgery performed. Note: Treatment may be medication, stockings, or mechanical devices for exercising the legs.	This measure reports how often patients who had surgery were given the appropriate treatment that prevents blood clots which is known to be effective for the type of surgery, based upon the recommendations of experts around the country. Note: Not every surgery requires treatment and this measure reports on those selected surgeries where evidence/experts have identified that treatment to prevent blood clots would be helpful.	99% of 488 eligible Patients <sup>7</sup>	100%	98%	100%	98%

The Joint Commission only reports measures endorsed by the National Quality Forum.
