

Accreditation Quality Report

Welcome to the Joint Commission's Quality Report. We know how important reliable information is to you and your family when making health care decisions. This Quality Report will help you make the right decisions to meet your needs. Since 1951, the Joint Commission has been the national leader in setting standards for health care organizations. When a health care organization seeks accreditation, it demonstrates commitment to giving safe, high quality health care and to continually working to improve that care.

The Quality Report is only one way to determine whether a health care organization can meet your needs. Discuss this report with your doctor or with other professional acquaintances before making a care decision. In addition to the accreditation status of the organization, the Quality Report uses checks, pluses, and minuses in each of the following key areas to help you compare a health care organization with similar accredited organizations.

- National Patient Safety Goals safety guidelines that target the prevention of medical errors such as surgery on the wrong side of the body and safe medication use.
- National Quality Improvement Goals measures the care of patients with specific conditions such as heart failure or pregnancy.

Not all measures are relevant to or available for all types of health care organizations. The Joint Commission will add relevant measures of health care quality as more measures become available. Your comments are just as important to us. The content and format of the Quality Report will be updated from time to time based on changes in the health care industry and your suggestions. Please call Customer Service at 630-792-5800 or e-mail the Joint Commission at qualityreport@jointcommission.org with your comments and suggestions.

Mark R. Chassin, MD, MPP, MPH President of the Joint Commission

Org ID: 7821

2008 National Patient Safety Goals

Symbol Key

The organization has met the National Patient Safety Goal.

The organization has not met the National Patient Safety Goal.

The Goal is not applicable for this organization.

For further information and explanation of the Quality Report contents, refer to the "Quality Report User Guide."

Hospital

Safety Goals	Organizations Should	Implemented
Improve the accuracy of patient identification.	Use at least two patient identifiers when providing care, treatment or services.	Ø
Improve the effectiveness of communication among caregivers.	For verbal or telephone orders or for telephonic reporting of critical test results, verify the complete order or test result by having the person receiving the information record and "read-back" the complete order or test result.	Ø
	Standardize a list of abbreviations, acronyms, symbols, and dose designations that are not to be used throughout the organization.	Ø
	Measure and assess, and if appropriate, take action to improve the timeliness of reporting, and the timeliness of receipt by the responsible licensed caregiver, of critical test results and values.	Ø
	Implement a standardized approach to "hand off" communications, including an opportunity to ask and respond to questions.	Ø
Improve the safety of using medications.	Identify and, at a minimum, annually review a list of look-alike/sound-alike drugs used by the organization, and take action to prevent errors involving the interchange of these drugs.	Ø
	Label all medications, medication containers (for example, syringes, medicine cups, basins), or other solutions on and off the sterile field.	Ø
	Reduce the likelihood of patient harm associated with the use of anticoagulation therapy.	Ø
Reduce the risk of health care-associated infections.	Comply with current World Health Organization (WHO) Hand Hygiene Guidelines or Centers for Disease Control and Prevention (CDC) hand hygiene guidelines.	Ø
	Manage as sentinel events all identified cases of unanticipated death or major permanent loss of function associated with a health care-associated infection.	Ø
Accurately and completely reconcile medications across the continuum of care.	There is a process for comparing the patient's current medications with those ordered for the patient while under the care of the organization.	Ø
	A complete list of the patient's medications is communicated to the next provider of service when a patient is referred or transferred to another setting, service, practitioner or level of care within or outside the organization. The complete list of medications is also provided to the patient on discharge from the facility.	Ø
Reduce the risk of patient harm resulting from falls.	Implement a fall reduction program including an evaluation of the effectiveness of the program.	Ø
Encourage patients' active involvement in their own care as a patient safety strategy.	Define and communicate the means for patients and their families to report concerns about safety and encourage them to do so.	Ø
The organization identifies safety risks inherent in its patient population.	The organization identifies patients at risk for suicide. [Applicable to psychiatric hospitals and patients being treated for	Ø

Measure Area Explanation Nationwide Statewide

Heart Attack Care This category of evidence based measures assesses the overall quality of care provided to Heart Attack (AMI) patients.

		Cor	npared to c	other Joint ed Organiz		n
		١	lationwide			wide
Measure	Explanation	Hospital Results	Top 10% Scored at Least:	Average Rate:	Top 10% Scored at Least:	Average Rate:
ACE inhibitor or ARB for LVSD*	Heart attack patients who receive either a prescription for a medicine called an "ACE inhibitor" or a medicine called an angiotensin receptor blocker (ARB) when they are discharged from the hospital. This measure reports what percent of heart attack patients who have problems with the heart pumping enough blood to the body were prescribed medicines to improve the heart's ability to pump blood.	97% of 123 eligible Patients	100%	97%	100%	97%
Adult smoking cessation advice/counseling*	Heart attack patients who are given advice about stopping smoking while they are in the hospital. This measure reports what percent of adult heart attack patients are provided advice and/or counseling to quit smoking. Smoking harms the heart, lungs and blood vessels and makes existing heart disease worse. Limitations of measure use - see Accreditation Quality Report User Guide.	99% of 224 eligible Patients	100%	100%	100%	100%
Aspirin at arrival*	Heart attack patients receiving aspirin when arriving at the hospital. This measure reports what percent of heart attack patients receive aspirin within 24 hours before or after they arrive at the hospital. Aspirin is beneficial because it reduces the tendency of blood to clot in blood vessels of the heart and improves survival rates.	99% of 360 eligible Patients	100%	99%	100%	99%

Measure Area Explanation Nationwide Statewide

Heart Attack Care This category of evidence based measures assesses the overall quality of care provided to Heart Attack (AMI) patients.

		Compared to other Joint Commission Accredited Organizations			n	
			Accredit Nationwide	ed Organiz		wide
Measure	Explanation	Hospital Results	Top 10% Scored	Average Rate:	Top 10% Scored	Average Rate:
Aspirin prescribed at discharge*	Heart attack patients who receive a prescription for aspirin when being discharged from the hospital. This measure reports how often aspirin was prescribed to heart attack patients when they are leaving a hospital. Aspirin is beneficial because it reduces the tendency of blood to clot in blood vessels of the heart and improves survival rates.	99% of 507 eligible Patients	at Least:	99%	100%	99%
Beta blocker prescribed at discharge*	Heart attack patients who have a medicine called a "beta blocker" prescribed when they are discharged from the hospital. This measure reports what percent of heart attack patients were prescribed a special type of medicine when leaving the hospital, that has been shown to reduce further heart damage.	99% of 501 eligible Patients	100%	99%	100%	99%
Primary PCI received within 90 minutes of hospital arrival*	Heart attack patient with a clogged artery in the heart that is opened with a balloon therapy called PCI within 90 minutes of hospital arrival. This measure reports how quickly heart attack patients had a clogged artery in the heart opened with a balloon therapy called PCI to increase blood flow to the heart and reduce heart damage. Lack of blood supply to heart muscle can cause lasting heart damage. In certain types of heart attacks, a small balloon is threaded into a blood vessel in the heart to open up a clogged artery that keeps the blood from flowing to the heart muscle. It is important that this therapy be given quickly after a heart attack is diagnosed.	95% of 61 eligible Patients	100%	91%	100%	92%

CMS Mortality Rates

Hospital

Center for Medicare and Medicaid (CMS) Hospital 30-Day Risk Adjusted Death (Mortality) compared to U.S. National Rate
The rates displayed in this table are from data reported for discharges July 2006 through June 2009
Last Updated: April 11, 2011

The U.S. National 30-day Death Rate from Heart Attack = 16%					
	Better Than U.S. National Rate (Adjusted mortality is lower than U.S. rate)	No Different Than U.S. National Rate (Adjusted mortality is about the same as U.S. rate or difference is uncertain)	Worse Than U.S. National Rate (Adjusted mortality is higher than U.S. Rate)		
30-Day Death (Mortality) Rates from Heart Attack = 14.6%		✓			
Number of Medicare Heart Attack	Patients = 628				
Out of 4569 hospitals in U.S.	95 hospitals in the U.S. Better than U.S. National Rate	2744 hospitals in the U.S. No different than U.S. National Rate	45 hospitals in the U.S. Worse than U.S. National Rate		
	1685 hospitals in the United States did not have enough cases to reliably tell how well they are performing				
Out of 116 hospitals in Tennessee	1 hospitals in Tennessee Better than U.S. National Rate	70 hospitals in Tennessee No different than U.S. National Rate	2 hospitals in Tennessee Worse than U.S. National Rate		
	43 hospitals in Tennessee did not have enough cases to reliably tell how well they are performing				

	The U.S. National 30-day Death Rate from Heart Failure = 11%					
	Better Than U.S. National Rate (Adjusted mortality is lower than U.S. rate)	No Different Than U.S. National Rate (Adjusted mortality is about the same as U.S. rate or difference is uncertain)	Worse Than U.S. National Rate (Adjusted mortality is higher than U.S. Rate)			
30-Day Death (Mortality) Rates from Heart Failure = 11.2%		/				
Number of Medicare Heart Failure	Patients = 517					
Out of 4743 hospitals in U.S.	199 hospitals in the U.S. Better than U.S. National Rate	3801 hospitals in the U.S. No different than U.S. National Rate	140 hospitals in the U.S. Worse than U.S. National Rate			
	603 hospitals in the United States did not have enough cases to reliably tell how well they are performing					
Out of 117 hospitals in Tennessee	1 hospitals in Tennessee Better than U.S. National Rate	*	8 hospitals in Tennessee Worse than U.S. National Rate			
	4 hospitals in Tennessee did not have enough cases to reliably tell how well they are performing					

	The U.S. National 30-day Death Rate from Pneumonia = 12%					
	Better Than U.S. National Rate (Adjusted mortality is lower than U.S. rate)	No Different Than U.S. National Rate (Adjusted mortality is about the same as U.S. rate or difference is uncertain)	Worse Than U.S. National Rate (Adjusted mortality is higher than U.S. Rate)			
30-Day Death (Mortality) Rates from Pneumonia = 12.9%		V				
Number of Medicare Pneumonia Patients = 596
